Science Citation Index®

Five – Year Cumulation

1965 – 1969

SOURCE INDEX

SOURCE INDEX

The *Source Index* lists in alphabetic order the names of every author of every source item processed for the *SCI*.® Full bibliographic data on each source item are given under the name of its first author. The names of all secondary authors are cross-referenced to that of the first author. An author's name appears only once, and beneath it are given first the one or more source items published by him during the year, and then cross-references to other source items of which he is a secondary author.

Under an author's name, source items for a particular year are listed in alphabetic order of journal title abbreviation. Each entry provides the following information: coauthors (a maximum of ten); a two-letter code for languages other than English; title of the article or an English translation of the title; journal title abbreviation; volume, page, year; code indicating type of source item (original article, letter, correction note, etc.); number of references provided by the source item; issue, part, or supplement number of the source journal.

The names of secondary authors are cross-referenced to a first author by a "see" reference. This reference includes not only the name of the first author but also the citation of the source item (journal title abbreviation, volume, page, year). As in the *Citation Index,* nine characters are allowed for surnames of citing authors; longer names are truncated by a period after the eighth letter of the name.

Anonymous source items appear at the beginning of the *Source Index* and are listed alphabetically by journal title abbreviation. Note that the title of the anonymous source item precedes the indented citation.

Authors' Names. The elements of compound names are fused; hyphens in compound names are dropped before fusing. Thus, *H. Avery Jones* appears as AVERYJONES H; *J. Smith-Wright,* as SMITHWRIGHT J. Conjunctions in compound names are not dropped; thus, *Jose Perez y Mendez* will appear as PEREZYMENDEZ J.

The treatment of particles in proper names is a difficult problem; in general the style of the author himself is followed, as far as it is possible to determine it. In general, this means that capitalized particles are treated as part of the last name and fused; non-capitalized particles are not considered part of the last name, and the initial letter of the particle, or of the first of several particles, will appear as an initial. Thus, *Robert La Follette* would appear as LAFOLLETTE R; while *Hermann Ludwig von Helmholtz* would appear as HELMHOLTZ HLV. The particles of Dutch names, whether capitalized or not, are generally considered part of the last name and are fused. Where there are particles of which some other than the first is capitalized, as in *Robert de La Salle,* the last name begins with the capitalized particle which is fused; thus LASALLE RD.

Names of religious are provided with an arbitrary *X* which appears as a second initial following the initial of the author's religious title. Thus, *Sister Mary Theresa* would appear as MARYTHERESA SX; *Mother Joseph Martyr* would appear as JOSEPHMARTYR MX.

Journal Title Abbreviations. The title of each source journal is abbreviated in the same way throughout the *SCI.* These abbreviations are limited to eleven characters (including spaces), and eliminate all diacritical marks, punctuation, etc. Nevertheless, care has been taken to make them as meaningful as possible. A list of abbreviations and full titles is given in Volume 5 of the *SCI.*

Supplements. In see-references, irregular supplements are indicated by an *S* in front of the volume number of the journal. The number of the supplement itself can be found under the appropriate first-author entry. Letters associated with volume and page numbers appear in front of them.

A *U* in front of a page number indicates that a source item begins on an unnumbered page near the numbered page given.

Language Abbreviations. The titles of ource items written in languages other than English are translated into English. The language of the original is indicated by one of the following abbreviations, which appears inparentheses in front of the title translation:

AF	Afrikaans
BU	Bulgarian
CH	Chinese
CZ	Czechoslovakian
DA	Danish
DU	Dutch
FI	Finnish
FL	Flemish
FR	French
GA	Gaelic
GE	German
HE	Hebrew
HU	Hungarian
IT	Italian
JA	Japanese
NO	Norwegian
PL	Polish
PT	Portugese
RM	Rumanian
RS	Russian
SC	Serbo-Croatian
SK	Slovakian
SN	Slovenian
SP	Spanish
SW	Swedish
UK	Ukrainian

A source item with sections in variouslanguages is given the code *XX*.

Source Type Code. Source items are coded to indicate type of material. The codes are single letters which appear after the two-digit year indicator. The codesare:

Blank	articles, reports, technical papers, etc.
A	abstracts of published items
B	critical reviews of books, films, articles, etc.
C	corrections, errata, etc.
D	discussions, conference items
E	editorials, editorial-like items
I	items about individuals (tributes, obituaries, etc.)
L	letters, communications, etc.
M	proceedings from meetings
N	technical notes
Q	bibliography for *SCI* supplied after primary publication, by source author
R	reviews & bibliographies
